SUMMARY

Full Stack Developer skilled in developing scalable web applications using Angular and .NET Core. Proficient in building secure REST APIs, implementing JWT authentication (access/refresh tokens), and using the Generic Repository Pattern for clean backend architecture. Strong understanding of frontend frameworks, responsive UI design, and database interaction. Committed to writing clean, maintainable, and testable code that delivers business value. Developed a keyless chatbot using [Microsoft.Agents.AI](#) and OllamaChatClient for offline, privacy-focused interactions with dynamic tool integrations.

EDUCATION

Gujarat Technological University

2021-2025

Bachelor of Engineering in

Information & Communication Technology

SKILLS

Frontend: Angular, React.js, TypeScript, Client-side Security Monitoring, HTML5, CSS3.

Backend: .NET Core, Node.js, C#, ASP.NET Web API, Argon2id Hashing, Dynamic DB Configuration.

Database: SQL Server Management Studio, MySQL

ORM: Entity Framework Core, Dapper

Architecture: Repository Pattern, DTOs, Dependency Injection

Tools: Visual Studio, VS Code, Postman, Git, GitHub, Swagger

Other: JWT Authentication, Local Storage Integrity, Guards, Interceptors.

WORK EXPERIENCE

Everest Instruments Pvt. Ltd. : Full Stack Developer

July 2025 - present

- End-to-End Architecture: Architected scalable full-stack applications using **Angular and .NET Core**, implementing dynamic connection strings that reduced deployment time by 40% across multi-environment setups.
- Advanced Security Engineering: Hardened application security via **Argon2id hashing** and custom LocalStorage monitors, decreasing unauthorized access attempts by 25% and ensuring 100% data integrity for client-side storage.
- Leadership & Backend Optimization: Designed robust APIs using **JWT and Entity Framework**, improving data retrieval speeds by 30% and leading a team of 4 through 10+ successful sprint cycles.
- **Full-Stack Web Development:** Spearheaded the end-to-end development and launch of the new **Everest Instruments** digital platform, transforming legacy modules into high-performance Angular components backed by a scalable .NET Core service layer.

Infolabz Pvt. Ltd. : Front-End Developer Intern

Jan 2025 - April 2025

- Designed and developed the Uniform Catalog Web App using React.js.
- Built clean, component-based UI architecture with a focus on performance and reusability.
- Designed responsive and modern layouts based on research, wireframes, and user-flow logic.
- Created app screens and web pages ensuring consistency in typography, color, and visual hierarchy.

Employee Management System | Angular, .NET Core, SQL Server, Argon2id

- **Architecture:** Developed a full-stack application using a Layered Architecture with Generic Repository Patterns and DTOs for clean data separation.
- **Dynamic Connectivity:** Implemented Dynamic Connection Strings to allow the application to switch database contexts at runtime based on environment or tenant requirements.
- **Advanced Security:** Integrated Argon2id (the industry-standard password hashing algorithm) to ensure resistance against GPU cracking and side-channel attacks.
- **Authentication:** Secured the system using JWT (Access/Refresh tokens) with Angular Interceptors and Guards for robust role-based access control (RBAC).

Task Manager | Angular, .NET Core, Dapper, JWT Security

- **Performance Optimization:** Built a high-performance backend using Dapper for optimized SQL queries and Reactive Forms in Angular for a seamless user experience.
- **Strict Security Validation:** Configured rigorous JWT Signature and Method validation to prevent algorithm-switching attacks and ensure 100% integrity of authentication tokens.
- **Data Management:** Developed advanced frontend features including multi-column filtering, server-side pagination, and real-time status tracking for task assignments.
- **Testing:** Conducted comprehensive end-to-end API testing using Postman to validate schema integrity and role-based permissions.

ToonSharp | .NET Core

- Built a .NET demo app to serialize identical data into TOON and JSON formats.
- Compared payload sizes, encoding efficiency, and parsing performance between both formats.
- Demonstrated how TOON significantly reduces data size for faster transmission.

To-Do Micoservice | React.js, Node.js, Express, MongoDB

- **Full-Stack Development:** Engineered a lightweight, responsive To-Do application using React Hooks for state management and Node.js for the backend API.
- **Asynchronous Communication:** Leveraged Axios for service-driven data fetching and implemented RESTful endpoints to manage task lifecycles.

Local Keyless Chatbot | C#, Microsoft.Agents.AI, OllamaChatClient, Dynamic Tools

- Engineered a local, keyless chatbot using Microsoft.Agents.AI and OllamaChatClient for offline, privacy-focused interactions. The chatbot integrates dynamic tools like GetStockPrice, SearchWebAsync, and CalculateMath to fetch real-time data and perform calculations.
- It uses ChatClientAgent to handle both factual queries and casual conversations, with an interactive console interface for seamless user interaction.
